

Gapminder dataset overview

The Gapminder Foundation started as a spin-off from Professor Hans Rosling's teaching at the Karolinska Institute in Stockholm.

The object of the Foundation is to promote sustainable global development and achievement of the United Nations Millennium Goals by increased use and understanding of statistics and other information about social, economic and environmental development at the local, national and global levels.

Consequently the foundation is making statistics and other information about development available to broad user groups via the Internet.

In this course we use a variety of indicators from the Gapminder web site. This document shows the currently available 519 variables, their source and a suggested breakdown into category and sub category. Going to the Gapminder website (<http://www.gapminder.org/data>) gives you more information about what the indicator means, units of measurements, where and when it was collected and other relevant information.

For this course, we have reduced the Gapminder data to about 50 demographic, health, economic and social variables. The dataset will be available in a FutureLearn folder on iNZight, a software program used throughout the course.

Our Gapminder data enables us to explore questions about health and economic circumstances around the world and changes over time using data on individual countries (statisticians talk about "country-level" data).

GAPMINDER DATA

The table below lists all indicators displayed in Gapminder World. Indicators labelled "Various sources" are compiled by Gapminder. They can be reused freely but please attribute Gapminder.
